

Bug Fix Report

RESOLVED & FIXED

Tester: Rabea Adel Date: August 24, 2026

Bug Identification

Bug ID	BUG-CHANGE-PASSWORD-001
Test Case ID	TC-change-password-002
Title	Change Password accepts a password that does not pass format rules
Module	Backend module 0 / 1 (Auth / Change Password)
Priority	High

Issue Overview & Resolution

Test Scenario	Change password with an invalid password format (satisfying length $\geq$ 8 characters only, but failing complex format rules) using a valid token.
Previous Behavior (Bug)	The Change Password endpoint accepted weak/invalid formats, updated successfully, and returned 200 OK.
Resolution Status	Fixed. Validation rules have been successfully updated and applied to the Change Password endpoint. Requests with invalid format structures are now correctly intercepted and rejected with appropriate validation error messages.

Verification Note: Re-testing confirms that passwords failing format criteria are now properly blocked prior to database commit, ensuring system security compliance.
